Usage Rights

- Enhanced forms for usage rights information
- Flexible rights processes
- License & Agreement Management

Technology Highlights

SiteFusion brings together best-of-breed technology components to create a highly-innovative,enterprise-strength Content Management Solution.

MarkLogic Database

MarkLogic is an enterprise-strength, state-of-the-art data and document platform that includes an integrated search engine and an RDF Triple Store to manage and use semantic knowledge graphs.
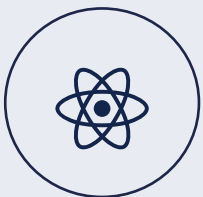

Camunda Workflow Engine

Camunda is one of the leading BPMN-based workflow engines and an enterprise platform for workflow and decision automation. With its open and scalable architecture it is the perfect foundation for all the processes inside and outside of SiteFusion. Camunda comes with an own BPMN modelling tool which is used by our consultants during the requirement analysis.

Java

Java is used worldwide as a robust programming language for enterprise applications. With its object-orientated approach, Java is perfect for stable and high performant software suits like SiteFusion.

React and Bootstrap

React and Bootstrap as modern JavaScript and CSS frameworks were used to enable maximum user experience and high performance as well. SiteFusion is completely browser based and runs on all common clients and operating systems.

Database Refactoring

Due to database refactoring technology, SiteFusion guarantees smooth updates without any manual intervention. The highly automated release and update process provides maximum time and cost efficiency for our clients.

REST-APIs

The powerful REST-API of SiteFusion grants standardized and flexible connectivity of third-party systems such as ERP, CRM or DTP. As a developer, you can either use our pre-defined business APIs or you can easily interact with the system by using self-created APIs.
